[Astrocyte - Wikipedia](#)

Astrocytes (Astro from Greek astron = star and cyte from Greek "kytos" = cavity but also means cell), also known collectively as astroglia, are characteristic star-shaped glial cells in the brain and spinal cord.

[Astrocytes | Network Glia](#)

Heterogeneity of astroglia Astrocytes (literally star-like cells) are the most numerous and diverse neuroglial cells in the CNS. While most neuroscientists think they know what an astrocyte is, there is no uniform and unequivocal definition of an astrocyte.

How can the connections of the neuron (connectome) explain the mind, without including the cells that control all phases of synapse development and function?

Astrocytes, the star shaped glial cells, are the most numerous cells in the brain. Glial cells outnumber neurons five to one (different ratios
