Effects of detergents on avidin-biotin interaction reported for avidin-biotin interactions, however, are conserved when the biotin is presented in covalent attachments to proteins which have been chemically modified with biotin derivatives. In fact, avidin-binding can be altered by varying the length of the linkers used to attach biotin to the modified protein (9). Since biotin binding may be far as 9 avidin surface it is reasonable that [Avidin-Biotin Interactions: Methods and Applications - PDF ...](#)

proteins - What does units/mg mean for Streptavidin ... One, biotin is essential to all organisms and, during

production of SAV, it is expected that some amount will bind to endogenous biotin, using up a binding pocket. This cannot be accounted for in the common binding assays. Two, depending on the method, purification of SAV can require harsh elution conditions which can deform some of the binding pockets.
