It also discusses the interaction of stratospheric aerosols produced in volcanic eruptions and the problem of estimating the climatic impact of such eruptions. Of especial interest is a discussion of the ongoing debate concerning the effects of clouds on atmospheric absorption of solar radiation, and the influence of this process on climate change. Whilst concluding that at present it is still

In short, the effect of aerosols on clouds and thus on climate is very uncertain. The climate forcing of greenhouse gases, aerosols, and other variants, is commonly expressed in terms of the resulting net change to the radiation balance, expressed in $W m^{-2}$.
