Cryptic female choice Wikipedia

Cryptic female choice is a form of mate choice which occurs both in pre and post copulatory circumstances when females in certain species use physical or chemical mechanisms to control a male's success of inseminating them; namely by selecting whether sperm are successful in fertilizing their eggs or not.

CRYPTIC FEMALE CHOICE IN THE YELLOW DUNG FLY BioOne

Abstract Both female choice and male-male competition may take place during reproduction in many species. Female choice tends to be less obvious than male-male competition and consequently has received less attention from researchers. The opportunity for cryptic female choice arises after multiple insemination. Through postcopulatory processes
