Social mobility and subjective well ScienceDirect com

An internal locus of control has been observed to act as a buffer against stressful life events, to protect from role strain, and to better suit jobs with high demands for autonomy and flexibility. For this reason, it may attenuate potentially harmful social mobility effects as well. Using German panel data of a cohort of former

Shark Conventions for Derivatives Shark 3 0a documentation

Background Gradient-based optimization is the most common reason for computing derivatives in Shark. Gradient-based optimizers operate on objective functions, however, these will often delegate the job further on to models, kernels, and loss or more general cost functions.
