DNA topoisomerases 5.1 Introduction Virtually every reaction that occurs in biological systems is catalysed by an enzyme. The interconversions of the different topological forms of DNA are no exceptions. The enzymes that catalyse these processes are known as DNA

topoisomerases and constitute a widespread and fascinating group. The 1st DNA topoisomerase was discovered by James Wang in 1971

The covalent topoisomerase-cleaved DNA reaction intermediate discussed above is referred to as the cleavage complex and is critical for the pharmacological activities of topoisomerases (discussed later).
