Measure ionization energy Hydrogen Deuterium Physics

In principle then we fire high energy photons separately at atomic hydrogen and deuterium and we measure the difference in KE of photoelectrons produced. Does that work and if so how accurate would it be ? (I have no idea how you first produce 'atomic' hydrogen but I presume that is something that must be done in the above mentioned transition measurements).

Ionization Energy Chemistry LibreTexts

Ionization energy is the energy needed to remove an electron from an atom or ion. Unlike atomic radii, we can and do measure ionization energies in the gas phase, when the atom or ion is not interacting with anything else.

Ionization energy measurements and electronic spectra for

The ionization energy (IE) for ThO has been determined using photoionization efficiency and mass-analyzed threshold ionization measurements. An IE of 6.6038(12) eV was obtained, which was appreciably higher than the result from previous appearance potential measurements [6.1(1) eV].
