A Revisit to Least Squares Orthogonal Distance Fitting of

A Revisit to Least Squares Orthogonal Distance Fitting 385 This approach has been widely used because of its simplicity. However its convergence rate is slow and is proven to be linear [5]. On the other hand, without separating P and t_1, \dots, t_n , the general optimization techniques of course can be applied. One can optimize P, t_1, \dots, t_n simultaneously [6] [7].

Abstract This book presents in detail a complete set of best-fit algorithms for general curves and surfaces in space. Such best-fit algorithms approximate and estimate curve and surface parameters by minimizing the shortest distances between the curve of surface and the measurement point.

These algorithms are applied to implicit and parametric curves and surfaces in 2D and 3D space possessing a broad variety of algorithmic features. Finally, an appendix provides practical information for applying the general orthogonal distance fitting algorithms to fit special model features. Obvious application areas of the algorithms presented are robot navigation, including the navigation of autonomous vehicles or the grasping of work pieces, as well as factory digitization in general.

often fit planes, spheres, or more complex surfaces (such as ellipsoids) to point clouds. We review the most advanced fitting methods and extend them to all quadratic curves and surfaces. We begin with the 2D fitting problem. Let $(x_1; y_1); \dots; (x_n; y_n)$ denote the observed points.
