Representations of Finite Groups Andrew Baker Gla

CHAPTER 1 Linear and multilinear algebra In this chapter we will study the linear algebra required in representation theory. Some of this will be familiar but there will also be new material, especially that on multilinear algebra.

Representation theory Wikipedia

Representation theory is a branch of mathematics that studies abstract algebraic structures by representing their elements as linear transformations of vector spaces, and studies modules over these abstract algebraic structures. In essence, a representation makes an abstract algebraic object more concrete by describing its elements by matrices

Representations of nite groups Abstract A micro-introduction to the theory of representations of nite groups. 1 Representations Let G be a nite group. A linear representation of G is a homomorphism $\rho : G \rightarrow GL(V)$ where $GL(V)$ is the group of invertible linear transformations of the vector space V . We shall restrict ourselves to nite-dimensional V . The dimension $\dim V = n$ is called the
