Malaria vaccine - Wikipedia

Malaria vaccine is a vaccine that is used to prevent malaria. The only approved vaccine as of 2015 is RTS,S. It requires four injections, and has a relatively low efficacy. The only approved vaccine as of 2015 is RTS,S.

CDC - Malaria - Features - Malaria Vaccine

Malaria kills approximately 900,000 people a year worldwide, most of them children living in sub-Saharan Africa. The Vaccine The vaccine candidate GlaxoSmithKline Biologicals' (GSKBio) RTS,S is the first of the current generation of malaria vaccines to warrant Phase III testing on this scale.

CDC - Malaria - Malaria Worldwide - How Can Malaria Cases ...

Malaria parasites have a complex life cycle, and there is poor understanding of the complex immune response to malaria infection. Malaria parasites are also genetically complex, producing thousands of potential antigens.

Unlike the diseases for which we currently have effective vaccines, exposure to malaria parasites does not confer lifelong protection. Acquired immunity only partially protects. Need for a vaccine | PATH's Malaria Vaccine Initiative Even a modestly efficacious malaria vaccine could protect hundreds of thousands of people from disease each year. What it will take to stop malaria Increased investment by donors and the private sector have made possible significant scientific advances since 2000, and helped bring malaria vaccines within reach.

Malaria and Malaria Vaccine Candidates | History of Vaccines

Scientists have expanded on what was learned in the 2002 study to develop many potential malaria vaccines. Instead of attempting a live attenuated vaccine, most scientists today are using technologies to isolate and deliver specific antigens in a vaccine. [14]
