[Microglia - Wikipedia](#)

Microglia are a type of neuroglia (glial cell) located throughout the brain and spinal cord. Microglia account for 10–15% of all cells found within the brain. As the resident macrophage cells, they act as the first and main form of active immune defense in the central nervous system (CNS). Microglia (and other neuroglia including astrocytes

microglia /mī krog'li-ə/ (mī-krog'le-ə) small nonneural cells forming part of the supporting structure of the central nervous system. They are migratory and act as phagocytes to waste products of nerve tissue. microg'li-ə

[Microglia | biology | Britannica.com](#)

Microglia: Microglia, type of neuronal support cell (neuroglia) occurring in the central nervous system of invertebrates and vertebrates that functions primarily as an immune cell. Microglia were first identified by histological staining with silver carbonate between 1919 and 1921 by Spanish neuroanatomist

Microglia. Microglia are the primary innate immune effector cells of the CNS and they represent a unique myeloid cell population whose origin and function must be clearly distinguished from other phagocytes in the brain (Ransohoff and Cardona, 2010).

[Microglia - definition of microglia by The Free Dictionary](#)

Small neuroglial cells of the central nervous system that have long processes and act as phagocytes at sites of neural damage or inflammation, destroying pathogens and damaged cells.

[Glia - Wikipedia](#)

Microglia are specialized macrophages capable of phagocytosis that protect neurons of the central nervous system. They are derived from the earliest wave of mononuclear cells that originate in yolk sac blood islands early in development, and colonize the brain shortly after

the neural precursors begin to differentiate.

Microglial function in the Healthy Brain

Microglia are the primary immune cells of the CNS, and are highly similar to peripheral macrophages. They act as the major inflammatory cell type in the brain, and respond to pathogens and injury by becoming activated a process whereby they rapidly change morphology, proliferate and migrate to the site of infection/injury where they

Microglial activation and chronic neurodegeneration

Microglia, the resident innate immune cells in the brain, have long been implicated in the pathology of neurodegenerative diseases. Accumulating evidence points to activated microglia as a chronic source of multiple neurotoxic factors, including tumor necrosis factor- α , nitric oxide, interleukin-1 β , and reactive oxygen species (ROS), driving

Microglia Antibody - Biocare Medical

Studies have shown that the Microglia antibody, also known as Iba1 (ionizing calcium-binding adaptor molecule 1), is a novel protein that it is specifically expressed in macrophages/microglia and is upregulated during the activation of these cells.
