Physical Properties Water Chemistry Salinity from

Salinity is usually measured in parts per thousand (ppt or ‰). The average ocean salinity is 35ppt and the average river water salinity is 0.5ppt or less. This means that in every kilogram (1000 grams) of seawater, 35 grams are salt. Because the water in estuaries is a mix of fresh water and ocean water, the salinity in most estuaries is less than the open ocean. Bottom water almost always

Density of Water Chapter 3 Density Middle School

Use the mass and volume of the water to calculate density. Record the density in g/cm³ in the chart. Pour off water until you have 50 mL of water in the graduated cylinder. If you accidentally pour out a little too much, add water until you get as close as you can to 50 mL. Find the mass of 50 mL of water. Record the mass in the activity sheet. Calculate and record the density. Next, pour off
