Role of Silicon in Plant Culture PRO MIX Greenhouse Growing

Silicon is the second most abundant element in the earth s crust and is found in significant quantities in the soil; however, silicon can only be taken up by the plant in the form of mono-silicic acid. Most dicots (broad leaf plants) take up small quantities of silicon and accumulate less than 0.5% in their tissue. Some monocots (grasses) such as rice and other wetland grasses accumulate up
