This paper addresses stabilization issue of switched nonlinear systems where some modes are stable and others may be unstable. A new stabilizing switching law that determines the initial states and the switching instants for any given switching sequence is proposed. The developed technique relies on the tradeoff among the functions gains of continuous modes, and does not depend on the constant ratio condition required in dwell-time scheme .

## **Stabilization of Switched Nonlinear Systems with Unstable**

This book provides its reader with a good understanding of the stabilization of switched nonlinear systems (SNS), systems that are of practical use in diverse situations: design of fault-tolerant systems in space- and aircraft; traffic control; and heat propagation control of semiconductor power chips. The practical background is emphasized throughout the book; interesting practical examples frequently illustrate the theoretical results with aircraft and spacecraft given particular prominence.

**Stabilization of positive switched delay systems with all**

This paper studies the stabilization problem of positive switched delay systems (PSDSs) with all modes unstable. Multiple discretized co-positive Lyapunov Krasovskii functionals are first introduced, by which a delay-dependent sufficient condition for global uniform asymptotic stability of continuous-time PSDSs is provided.
